A special Kavli Day workshop

Fraud in science - not in your group?

Fraud is closer than you might think in our nanoworld!

Speakers:

Wilfred van der Wiel
(University of Twente)

Derek Stein
(Brown University)

Occasionally, we hear about fraud in science through the media. While this happens, we think this, of course, does not occur in our labs. Indeed, most of us pursue science in an honest truth-seeking way. But fraud can be surprisingly closer than you might think in our world of nanoscience. At the 2016 Kavli Day we will feature a workshop that discusses some actual cases of fraud that happened in quantum/bionanoscience labs, as well as we will discuss best practices to avoid such fraud. The workshop will feature two speakers who did research at Delft as PhD student or postdoc and subsequently set up their own labs as professors where they encountered fraud committed by their students. The workshop will also feature a broad discussion with the audience.
